

System Engineer Assembly-Integration-Test (m/f/x)

For over 28 years, Munich based STT-SystemTechnik GmbH, has been very successfully designing, developing and manufacturing highly reliable radio frequency data transmission systems and antennas for industry, aerospace and space. Our equipment and systems operate reliable in many different applications worldwide -and in the vastness of the universe- under very harsh environmental conditions.

To strengthen our team, we are currently looking for a System Engineer Assembly-Integration-Test (AIT) (m/f/x) joining us at the earliest possible date.

Your area of responsibility would include:

- Preparation of test procedures as well as implementation and documentation of tests for verification of the performance of our soft- and hardware, while operating under different environmental conditions (vibration, temperature, radiation, vacuum, EMC, etc.)
- Planning, implementation and documentation of integration, functional and system tests, as well as accompanying verification tests on our hard- and software
- Planning and preparing test setups with all required test / measurement equipment, test jigs with interface circuits and test harness
- Preparation of scripts (C, Python) for the automated execution of tests
- Planning and Assembly / Integration of units / equipment into a complete system
- Responsibility for operation and maintenance of our environmental testing facilities

What you can expect from us:

- We offer an international, highly innovative and exciting environment,
- You work actively on very interesting projects for our customers worldwide,
- You can successfully contribute with your own knowledge, experience and ideas, as well as your passion for electronics
- You will find an open and modern working environment in a familiar atmosphere

What skills you should bring along:

- A degree in electrical engineering, physics or any equivalent qualification
- Relevant working experience in the sector of AIT, preferably in aerospace
- Detailed and well-founded knowledge in electronics with practical experience in analogue, digital and high frequency technology
- Detailed knowledge of relevant guidelines and standards of industry and aerospace
- Practical skills, as well as logically structured working method and an analytic way of thinking

This is how you inspire us:

- Your strong motivation and your dependability
- Your high awareness for quality
- Your ability to work both independently and within a team
- Your organizational talent and your creativity

We also offer many benefits:

- free coffee, fruits, drinks and snacks,
- above-average leave days,
- flexible working hours,
- modern equipment and IT,
- company pension scheme,
- flat hierarchy,
- no dress code – come as you are

Join our extraordinary team and shape forward-looking innovations together with us.

If you feel addressed and if you think this job is what you've been looking for, please send us your detailed application stating the earliest date you could start and your salary expectations.
